WORK EXPERIENCES

1. **Django Web Developer (Remote Internship), LinuxJobber Inc.** *- Jan/2018 - Mar/2018 -* Lagos State

 (LinuxJobber is a top IT company provides and empowers undergraduates and fresh graduates with a 3-month Internship program designed to help boost their skills and build experience as Developers and System Admins)

⇢ Learnt and worked with the Django (Python) Web Framework to build backend structures for scalable web applications.

⇢ Translated designs or written documentations into a working web application by writing maintainable and scalable codes.

⇢ Understood the importance of using virtual environments during the development processes also worked with trending IDEs like VS Code and ATOM to improve productivity and maintainability.

⇢ Collaborated with other remote interns on execution of new ideas and collective improvement of the team by learning new methods outside the scopes of the internship syllabus (e.g Hosting a django web application)

⇢ Finally, built, implemented and maintained a user-friendly goal-keeping web application & back-end services using HTML,CSS, Twitter Bootstrap and the django framework itself, demonstrating service-oriented architecture and focus on client's needs.

SIDE PROJECTS

Personal portfolio website : Armed with the knowledge acquired during the internship: Built a personal website that will be a documentation of my actvities, projects, improvement and involvement in new technologies, e.t.c.

2. **Python Programmer (Volunteer), PythonForEverything Bootcamp** - Nov*/2018 - Dec/2018 -* Ikorodu, Lagos State

PythonForEverything bootcamp was a 6-week course for beginner & intermediate python programmers to teach about numerous and in-depth applications of Python programming language

⇢ Carefully curated and introduced python as a programming language with a well-structured syllabus to the participants under beginner section of the bootcamp for 2 weeks

⇢ Trained and effectively mentored students on personal projects carried out during the course of the bootcamp

⇢ Performed a live demo of steps involved for performing a webscrapping exercise with third-party modules (tools) like Selenium, BeautifulSoup, Webbrowser and ChromeDriver

SIDE PROJECTS

Command line Emailer: *A python script that enables you to send one email at a time from the your favorite command line simply by typing "python cliEmailer.py <'reciepient'> <' message to be sent'>"*

Automated Lyrics Finder: *Python script that takes the name of an artist and their song as a command line argument and in return takes you to the lyrics of the song specified.*
